AUTOMATIC FUNCTIONS

CONTROL YOUR SMART HOME WITH YOUR VOICE

With Yokis smart digital modules you can control lights, shutters, doors and other devices at home quickly and easily using local or centralised controls. From today it is also possible to manage Yokis products with Google Home, offering maximum comfort thanks to hands-free control of your home.

Google Home

Google Home Mini

Hey Google, open the gate.

Are you making dinner when through the window you see your son arriving? Ask Google Home to open the gate.

Hey Google, dim the lights in the living room.

Is a good film about to start but there's too much light in the room? Without getting up from the couch, ask Google Home to dim the lights and then enjoy the evening!

MAKE THE MOST OF INTEGRATION

Controlling the lights with your voice is just the beginning. Make the most of your Yokis electrical system by asking Google Home to:

- Open the gate
- Turn on or adjust the intensity of the lights
- Turn off an appliance
- Recall your favourite scenarios.

REQUIREMENTS

- Installation of Yokis radio modules in your electrical system
- The Yokis hub web server that allows Google Assistant to communicate with the installed Yokis products.

The Yokis modules must be installed by a professional. Ask your installer!

Hey Google, turn off all the lights.

You just started a video game but the light is bothering you? Ask Google Home to turn off all the lights in the room and continue playing.

Hey Google, activate the "sunset" scenario.

It's getting dark and you want to lower the shutters without interrupting what you're doing? Ask Google Home to do it for you!

EXPLORE YOKIS PRODUCTS

Yokis is a full range of digital modules for the electrical system, able to realise simple home automation systems for the centralised management of shutters, lights and automatic functions. Available in wired, radio and hybrid versions, it can manage numerous programs and lighting and automatic functions: controls, dimmers, centralisation, timing, scenarios.

Built-in radio modules or for electrical panels

Lighting, shutters and management of electrical loads

Remote controls and plates

To activate just one device or centralised controls

Solutions for the connected home

Yokis Hub, Yokis Pro app for the installer and YnO for the final user

Besides using Google Assistant, the installed Yokis devices can be controlled through the switches of the electrical system or more comfortably with local and remote radio controls, through the free app **YnO** available in the stores.
