

Wiring of several shutter modules MVR500E on a single twin button

DAILY SCHEDULER

Daily opening and closing times can be scheduled.

To do so, at the DESIRED TIME, make:

- 8 presses to store the closing time
- 9 presses to store the opening time
- 7 presses to store the intermediate position time

NOTE: In case of power supply failure, MVR500E deletes all scheduled values; it will thus be necessary to repeat the configuration to the desired times.

As an alternative, you can connect an external time switch or a twilight sensor through accessory CVI34 (Part no. 5454806).

IMPORTANT

Installer configuration enabling:

23 short presses

Installer configuration lock:

21 short presses
