

Dimmer in mixed (wired and radio) system:
it requires the MTV500E dimmer for wired section and a MTR2000ER for radio section

IMPORTANT

Installer configuration enabling: **23 presses**
 Installer configuration block: **21 presses**

CONFIGURATION OF THE MTR2000ER PILOTING TRANSMITTER

All Yokis transmitters are compatible

- 1) **Establish a direct connection between the transmitter and the MTR2000ER receiver.**
 Then apply **5 short presses** on the transmitter selected pushbutton, then **press 'connect' on the MTR2000ER.**
- 2) **Instant mode configuration:**
 In this mode, MTR2000ER contact follows the operation of the transmitter pushbutton. When the transmitter pushbutton is pressed, MTR2000ER contact is closed; as soon as the pushbutton is released, the contact opens.
 - Apply 10 short presses on any pushbutton on the transmitter (Configuration Menu). The transmitter LED will flash quickly.
 - As the LED flashes, apply 17 short presses on the pushbutton you wish to configure.
 - After applying the 17 short presses, the LED will flash 7 times to confirm the configuration.
